

The Human's Foetus Brain, is Acted by the Magnetic Field of the Celestial Planet, Where to Cause the Real Zodiac Function.

Adnan Yousif Rojeab
The London College
U.C.K., London, U.K.

Abstract

The magnetic field of celestial planets have their strong effect on the human kind. Where, the real functioning of the characteristics of a person's life, could be influenced by the effect of the magnetic formatting state process on the foetus level of the human. The formatting state is occurring on the foetus's human brain. It is when the performing effect of the celestial planets' magnetic field is onto the foetus's brain. Where, this is during a certain state of the foetus magnetic formation, and, then, marked the real zodiac of a person. Therefore, the real time of a person's zodiac, is entirely not the time of the birth day of the person.

Keywords: celestial magnetic planets, foetus's brain, magnetic formatting process, marked the real zodiac of a person, birth day of a person.

1- Introduction:

The main function of this work is to display the novel and practical real characteristic of the life of the human. The method is by displaying and depending on the aims of the alignment of the subject of the astronomical science, which is for showing the action of the magnetic strength of the celestial planets.

Then, initially, it is important to display the original main factors that are associating with the functioning of the general subject of human life, [from foetus formation]. Where, it is, to show the real phenomenon of zodiac. Therefore, accordingly, to discuss the application and the effect of these factors, in order to show the real and the novel method, which is to deal with the subject of true zodiac and the characteristics of the human as a whole.

As the astronomy science is concerning with the planets' magnetism, [1], the theory of the astrophysicist Percy Seymour, [an expert in planetary magnetism], shows that parts of astronomy work through four features of nature: magnetism, harmonic, genetics and neurology.

The main effect of the human characteristic, [and then the general of real zodiac] concept is concerning with the action of the human's brain. Where the brain is, entirely, responsible for the whole of the human practical functions and behaviours. Therefore, items concerning with the brain and that of human function should be explained.

Initially, it is emphasised to show that, brain of the human, [or other living creatures], can be effected by the magnetic action of the planets, which are near or even, (respectively), far from the earth, [2].

It is believed that, there are three main factors concerning with the human action- characteristic subject, and they are, as the following:

a) The Magnetic effect of the planets, **b)** The Gestation and Conception, [The pregnancy], and the brain creation of the foetus, and **c)** The Magnetic Formatting of the brain.

2- The Magnetic action of the Planets:

Planets magnetic effect: It is well shown by the astronomical science, that: Our solar and other farer planets are effecting the surrounding of the Earth by their magnetic fields, [2]. Where, also, changes in solar and geomagnetic activity, cosmic rays and the frequencies known as the Schumann resonances. Therefore, as this will lead to that the Earth is effected by the planets magnetic field, then. human autonomic nervous systems respond to environment influences, [3].

Accordingly, all biological systems on Earth are exposed to an external and internal environment of fluctuating invisible magnetic fields. These fields can act virtually every cell and circuit to a greater or lesser degree [3].

Where, also, a large variety of animals possess a magnetic sense, as that of some sort of fish and birds [4]. This shows that, a various number of animals are having the ability to sense and to be acted by the Earth magnetic field.

It is shown that some animals have the ability to possess a magnetic sense, and accordingly, they have the ability to sense and identify magnetic directions. Where then, they are able to navigate for different distances. This has been shown by the action of some sort of birds – as Pigeon - and that of certain fish, like salmon [4]. This navigation is comparable to that of the compass which is help the human person to navigate by using the magnetic field. Therefore, as it is found that, each of these animals have deposits of biological magnetite in their nervous systems, [4].

It is, also, found that, all of human bodies emit an electromagnetic field, and this fact plays a very important role far beyond what is commonly known when it comes to understanding our biology, and the interconnectedness we share with all life, [5].

The solar and geomagnetic activity can affect human health and behaviour, including social behaviour and unrest around the world, [6]. It is shown that some animals and the nervous systems of people in close proximity can detect a bio-electromagnetic field, such as that radiated by the human heart and brain can affect other individuals and the global information field environment.

Solar activity has been correlated with social unrest, destructive climatic conditions and other adverse events, and also with periods of great human achievement, including in architecture, arts and science and positive social change, [7].

For the real known that, human subject system, finally, has its atoms containing of electrons, then, the humans have both electrical and magnetic energies, i.e. electromagnetic fields. This means that humans, {and other creatures [kind beings]}, are to be in *co-operating action*, by the outer electromagnetic atmosphere.

It is right and true, always, that the magnetic field of the sun, our solar planets, and other farer planets, (in the atmosphere outer of our solar system), are acting towards onto humans, from the time of the foetus period.

Then, for the solar system, the alignment of planetary magnetic fields create a magnetic tonal chord on earth that plays into the neurological development of the foetus [2].

Accordingly, the individual remains attuned to the particular planetary alignment for life.

Depending on the fact that, the human's nervous is affected by a sort of electrical charges movements, [electric currents]. Therefore, the fluctuations of the geomagnetic field cause a changes in the nerve-

network. The relative positions of the sun, earth and other planets are causing a sort of complex tune which is to apply on the earth’s magnetic field, [2]. Also, there is a tune respond to the tunes of the planets as that of the moon or others of those in our solar system.

Accordingly, this will show that how are, possibly, the people will respond in future to the various positions of the planets, [2]

For the fact that, all of the actions of the planets’ magnetic fields are always existing, then this keeping each individual human is, generally, calibrated to a certain planet, where, this is an important practical idea.

3- The Gestation and Conception [The pregnancy]:

The Gestation, is the period of time between conception and birth of a baby, when a foetus grows and develops inside the mother's womb.

As it is known that, for a human female, it is usually given a duration of a normal gestation, which is a period of 27 to 41 weeks, [around six months to about ten months], which is the length time from the conception to birth, [of delivering the baby].

The important factor, which should be recognised is that, it is very difficult, [or, even nearly to be impossible], to know exactly the occurrence time of the conception.

The sort of difficulty is concerning with that of no possibility, [until now], to know the exact day [time] at which the female egg cell has been fertilized. Where, it is delivered to the oval, as that can be seen by Table 3-1.

Then the action of the egg cell fertilisation could be any time during the two weeks, when the egg cell is to be in the situation of being waiting in the ovary.

A Period Time.	Time of the Safe from Pregnancy	Time of the possibility for Pregnancy	Next Period Time
One of Menstrual cycle	About two weeks time duration of:	Duration time of about two weeks:	Time of destroying the unfertilized egg.
	There is no egg cell in the ovary	A new egg cell is to be in the ovary. Counted as a part of the measurement of the gestation time. [The time of the possibility for an egg to be fertilized].	Menstrual cycle.
menstrual cycle is finished. →	starting time of new egg. →	a starting time to destroy the egg →	

Table 3- 1: Schematic diagram to display and explain the stages for: the menstrual, the egg in the ovary, and counting the beginning of the gestation time.

Therefore, to have a fixed method to measure the time, [in weeks], the duration of the gestation age, is to count the duration time (of gestation), from the first day of the mother’s possibility for pregnancy [last menstrual cycle] to the current date [8].

From the information, [data], of Table 3 -1, it can be shown that:

When exactly the last menstrual cycle is finished, then there will be, (usually), a two weeks time of no egg been supplied to the ovary.

During the end of the second week, an egg cell is released from the ovary, and the women is most likely to conceive [8]. Then the end of the second week [of no egg in the ovary], is [usually], counted as a part of the measurement of the gestation time.

Growth of the foetus, and the brain:

The fertilising egg cell is immediately started to divide and grow, and to be a foetus of possessing all organs and body systems.

In week five, [of the foetus formation], it is the time for the starting of the embryonic period. Blood cells, kidney and nerve cells all are developed, [8].

The foetus brain, spinal cord and heart, are also, began to be developed. Then for weeks 6 and 7, the foetus's brain form into 5 different areas, where also, some cranial nerves are visible, [8]. Also, as time is passing, for week eight and on, the foetus's brain continues to grow.

4- The Magnetic Formatting of the brain:

The formatting, in general, is: a process of applying a sort of method on a suitable material, to prepare a certain medium, on it, for performing data storage, [9]. The medium which is used for store and save the information, is like that of a computer disk. Then this medium is to be used for operation.

Thus, the formatting process is operating on a medium for fully preparing to store a data. This is a process to arrange, or structural, data in a system of saving information, and it is not just a file system, [10]. Where, in one of the general practical application, the formatting is applied as a magnetic action.

The direct application to this magnetic formatting, has a similarity to that of computer action: Which is, when applying the computer operation, so the device medium, [as those devices of hard drive or disk – floppy disk], should be, initially, prepared to work for storage information (data), [11].

Then, this means that, this storage process is to apply a certain action called formatting. Where, this is to let and prepare the device to be ready to read and write in cooperation under the influence of a certain system of operation, [like that of: IBM or Macintosh [Mackintosh] computer systems of operation].

The device is usually formatted before it is used, where, as this device is, usually, having like a plain medium, which can accept any certain system of formatting. Therefore, the method is to follow the procedure of a certain formatting, and, then, to have a storage information, (data) on it, [11].

Then, it could be a similar method, is affecting by the function of the magnetic planets, which may be acting to prepare the human foetus's brain, to work and apply according to a process of a certain method. This is according to the fact that, the brain of the human can be effected by the magnetic action of the planets, [2].

This way of preparing, to the human foetus's brain, is to follow a process action of a certain planets' magnetic. Where, this magnetic action is to operate, and deal with the brain, at a certain time of a year, [when the brain is able to accepting the action].

Therefore, this is to show that, human's brain is following a similar, [identical], analogues method of that of the magnetic formatting. Accordingly, the planets' magnetic action is to have the responsibility to preparing the medium, (of the plane), of the brain, for a certain method of formatting system, for storage information.

5 – Practical applications which are opposing to the resulting of the traditional zodiac sign:

There are two main applications to show the practical opposing to the idea of the traditional zodiac sign:

A) There are some practical matter of babies birth performances, show that they have different characteristics [behaviour] to the results of traditional zodiac sign. This shows that many people whom

are born in the same time, [of the day of a year], but they are not having the similar behaviour of the same traditional zodiac sign. Where, some researches emphasise that:

A1): Steyn, [12], in his specific study showed that: A large group of 65 268 job seekers, [59% females of mean age equal to 24.8 years], was assessed by means of a personality questionnaire, has found that neither traditional zodiac star sign, nor planetary alignment influence personality.

A2): Also, Hartmann, et al, [13], have investigated the relationship between date of birth and individual difference in personality and intelligence in two large samples of: 4,000 middle – aged male subjects, and 11,000 young adults. The investigators had found: In no cases did date of birth related to individual differences in personality of general intelligence.

B) To say that: The positions and sights of the planets, with respect to the Earth, have now been changed in the function through many thousands of the years, where the traditional zodiac action was applied on the human of that past time. Where, horoscope always telling you the wrong things. NASA think you might be looking at wrong one (horoscope), [14]. Daily horoscopes are based on the Sun's movement through the 12 astrological zodiac signs – but the signs are nowhere near where they should be, according to NASA.

This to show the result of that: the planets' axis has shifted out of the alignment it held when our ancestors looked up to the night sky and drew out shaped in the stars. Then, it means that, the majority of people will have a different star sign to the one they think they've got, [14].

6- Discussion:

Depending on the nature of the humans creature, (and their Earth), it is shown that, these humans are always under the effects of the action of these factors of: the Planets' Attraction Forces, Electromagnetic Waves, [exploitations], from the Sun and nearest Planets to the Earth, which has been always shown and accepted by the astronomical science. Concerning with this fact, a great certain physical and psychological actions are to be the results on the, general, behaviour of the life of the human. Where, then, to form the, sort of general, action of characteristics sign of a human.

Accordingly, if it is accepted to have a firm effect time for that of the human's traditional zodiac sign, two main factors are very important to be known, and they are:

- a) The exact time of the mother's conception occurrence. Where, then, it is for the important, to be able to know the exact time for the establishing of the foetus's brain, and,
- b) The exact time of the magnetic action of a certain type of planets, and that of the method of magnetic formatting to the foetus's brain, by the planets magnetic fields action.

Now, then, it is important to start for discussion from the fact, that: to consider the brain to be accounted as a main important for operating derive of the body. The brain, in the foetus formation, can be prepared to work in response to the effect of the magnetic field of some certain planets. Which means that the magnetic fields of the certain planets are formatting the working medium of the brain. Therefore, this shows that, the magnetic fields of these planets could direct the alignment of the general action of the method of the functional operation of the brain. This could be happened in such a certain action and method of the formatting operation.

Therefore, the acting of the foetus's brain is affected by concerning with a certain type of behaviour, which is according to the influencing of what is the planets' magnetic field possessing.

The, relatively, respective, huge amount of planets around the human, means that, the action of the magnetic field is varied, which depends on the varieties of the planets, themselves.

For a certain planet, the magnetic fields are, then, acting on the active storage medium of the foetus's brain.

Then, it is important, (in this occasion), to show the fact that: in spite of the general type of the individual method of thinking of a person, [of his own], the planets are, also, acting. (...)

Then accordingly, it should be realized that:

The characteristics, of the foetus's brain are, generally, going to be under the influence action of the magnetic fields of the planets. This action is usually performed by the process of the magnetic formatting onto the brain. Where this been done during the time of the fifth week of the foetus age, when it is in a mother's womb. Where in this age of the foetus, the brain is existing, and, then, it is to be ready to receive the magnetic formatting action of the planets' magnetic field.

The magnetic field of the planets is, then, possibly to have a certain influence to direct and magnetic formatting on the function of the foetus's brain. Where, this effect can be performed at a certain state of brain formation grows. Where, usually, the method of magnetic formatting is occurring at an especial time and shape of the foetus's brain. Then, this is the stage, that, when the foetus's brain is to be able to grew, and to have the starting performing of the magnetic formatting. Then, to let this magnetic formatting action is to be, approximately, in a permanent existence to the brain.

Therefore, the most important situation in this matter to be known, is that:

The time of the magnetic formatting, (to the foetus brain), can't [entirely], been known exactly, as it is not possible to be clearly counted. This is related to that, the occurrence time of the mother's conception is, in fact, can't been exactly known.

The performance of the magnetic formatting, (to the foetus's brain), will lead, [among other important life factors], the person in future life, [after birth], to possess, a certain general direction of behaviour in the life, where then to be acting accordingly.

This, in actual life, is the share of stamped to the future of, generally, personality behaviour of a person. Therefore, when the magnetic formatting is performed completely to the foetus's brain, then the process is going to be as a sort of permanent formatting. Accordingly, any future magnetic actions of the planets, will not going to have any dramatic changing on the original formatting performing of the brain of a person. While, there will be a rarely possibility to have a change to the permanent formatting, and that by very strong, respectively, action of external magnetic field, or by an action could affect the life of the person.

It is, now, the person, [generally], could have in future, the behaviour and personal characteristics, which is according to that magnetic action. Which, this been performed by the planets on the brain, by the formatting time, as it is one factor among many others in life.

While, it is true as well, the life experience will have, also, an effect on the behaviour and personality of the person, in future.

Hence, from the previous explanation, it shows that the time of the birth of a child, [the hour and the day of the child's been delivered], is not, entirely, going to have any general effect on the stamped of the personality or behaviour of the child's future life. Where, this time, of the delivered birth, is not, entirely, accounted as the traditional zodiac of the person. Thus, in action, the delivering time of [hour and day], of a person, is only accounting, now, as an important time for the date of birth.

The important is to improve the fact that, the magnetic action, [of the planets in the hour and day of the child's birth], is not effecting on the behaviour of the birthed time of a child. Where, that, can be realised by considering the fact that:

The magnetic actions of the planets, are **not** going to effect on the mother's traditional zodiac sign on the birthed of her child, and, also, not effecting the traditional zodiac labels of any other people who have happened to be there, near the mother during the time of her giving birth to her child. This means that,

each one of these people is, still, having their own traditional zodiac sign characteristics, as it is usually been.

Where, if suppose that, the time of a baby's birth, will be its traditional zodiac sign, which means that as a certain magnetic fields of planets, are able, to acting on the baby in the time of the birth, while, (in this case), it could be argue that: why these same magnetic fields are not able to acting on the mother of the baby, and, also, on the other people who have happened to be there, [with the mother], in the time of birth.

Where, the actual argue for this phenomenon is that:

The magnetic action, of the magnetic planets, are affecting the foetus's brain by formatting action at a certain duration process, while the mother (and other people), now, are not in this certain situation. Also, the mother, as a fact, had been in this magnetic formatting situation when she was a foetus in her mother womb.

Accordingly, the mother, [and her relatives around her], are having their brains in complete matter in the time of the birth of the child.

Then, the logic result is that: this means that, the way of accounting of this traditional zodiac method of a person, is not the exact right matter for the performance method to what actually happened. Also, if, supposed that it is happened, then, it means that the mother of a child, will have a variety of traditional zodiac time characteristics, depending on the different times of her giving birth to each of her babies. The main explain is that, the mother has her own magnetic formatting action when she was in a foetus formation time, and then, the new magnetic action will not affecting her.

There is not a especial function, [occasion], for the birth, [delivery], time of a child to receive the effect of magnetic of the planets. While the magnetic action of the planets are having an especial action on the foetus brain. This is for the formatting action to the foetus's brain.

Accordingly, there should be a special situation for the action time of the magnetic field of the planets on a foetus' brain. Where, it is when the time of the existence of the foetus's brain, and then the brain to be formatted

In other words, the traditional **zodiac** sign of a person, should be only occurring, at a time when the magnetic fields of the planets are affecting the brain during the time of a foetus state.

Also, this situation has to be performed when the foetus's brain is being able to be formatted by the planets magnetic fields. This is for the foetus's brain, when the foetus is nearly at the fifth weeks of age. As well as, there is not an exact estimation to the age of the foetus to have its brain to start to be established.

Now, practically, the **time** of planets' magnetic action, on the foetus's brain, [as it is shown in previous], is not **exactly** possible to be known. Therefore, it is not possible to be able to label any person by a certain traditional **zodiac** sign. Then the zodiac sign time could, only, be said, to be "approximately" but not "exactly", for a person.

Hence, there will be two important factors which are preventing to make it firmly to know the exact time of the traditional zodiac sign of a person, and these factors are:

- 1- The exact time of the fertilizing of the mother's egg cell, [conception time of the mother]. Where, then, accordingly, it is not to be known the exact time of the foetus's brain to be existed, and formed.
- 2- The exact time of the planets magnetic action, and then, to perform the formatting to the foetus's brain. Which means that the time is not been known, for the foetus brain's to be able to response to the planets' magnetic action.

Therefore, it is important, accordingly, to realise that:

The list tables that, already, been published for the traditional zodiac characteristics of the main, [general] behaviours and personalities, of the people, are not going to be, exactly, correct. Where, this is, simply, because it is, entirely, not known which a person should be considered to this or that traditional zodiac sign characteristics. Hence, the characteristics of any zodiac sign may not going to be true, where, then, it is not right to be depend on.

Where, this matter can be explained by viewing that:

If, suppose that, for example, some babies have been born in the first of October [and even at the same certain hour of the day], then the possibilities of their traditional zodiac sign should depend on two main occasions:

1- For the time of their mothers' conception: There is a duration time of two weeks difference, (for a new egg cell to be in the ovary of the mother), to have the starting of pregnancy, as the Figure of Table 3.1 indicated.

Then it could be shown that the conception could be started at different time [during the two weeks], as can be shown by the diagram of Figure 6. 1. This means that the conception is possible to be performed at: the beginning, middle or the end of these two weeks. Then, the difference in the conception time, [during the conception duration], will effect the exact time of concerning the traditional zodiac sign of the person.

This could show that, the beginning life of all foetuses, [as, they been in the wombs of their mothers], are to be in differences of two weeks time between them. Although their mothers had had their menstrual cycles were finished at the same time, [starting form the following month and on].

2- The exact time of the magnetic formatting action on the foetus's brain: which is when the brain been ready to be formatted. Where this is, usually, occurred when the foetus age is about five weeks. While this time, [for the foetus's brain to be existed and to be ready for formatting], is not entirely exact to be occurred for every foetus.

Therefore, according to these two important circumstances, there will be not right of existing of that of sure of zodiac sign for persons whom been delivered in a same certain time.

This matter can be discussed in the following articles:

A) The babies whom will be born, [for example], in the morning of the first day of November, their condition, may be is like that:

They may have about two weeks of variety for the differences between them, as of the mothers' egg cells were fertilizing to create each of them. Where, also, accordingly, it is that the difference of their brain's formatting time, [as this is shown in the diagram of Figure 6 -1].

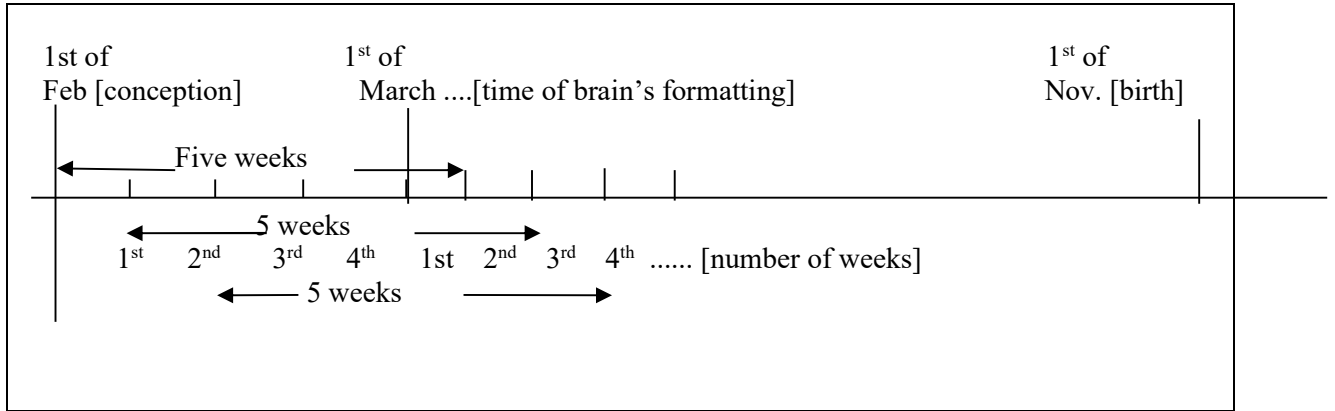

Figure 6 – 1: Showing the different of two weeks, for conception time, [of mothers], the different formatting time, [of foetuses' brains], and at the same birth time, [of babies].

This is to say that: If it is assumed that the magnetic formatting to the foetus's brain is performed to a foetus of age about five weeks. While, as well, it is not known when, exactly, the magnetic formatting is occurred to foetus brain.

Then this means that, these babies could had about two weeks of differences in time of the real zodiac sign, between them. Where, then, some part of babies could have their zodiac signs, [which is according to the magnetic formatting operation time], on the end of the 1st week of March, [five weeks of the foetus's age, where the brain could be able to be formatted].

Another part of babies could had their real zodiac signs in the end of the 2nd week of March. While other part of babies could had their real zodiac signs in the end of the 3rd week of March.

As this is all can be shown in the diagram of Figure 6-1. Where, the mothers, of all of these parts of babies, could be counted to have their starting pregnancy from the beginning of February, while they, could possibly, to have, in the reality, about two weeks in difference of true starting of their pregnancy. Where, then, on about the beginning of November, there will be around nine months, and hence, all mothers, [may be], to deliver their babies.

This shows that babies whom been born in the same time [as that of beginning of November], are not having the same real zodiac sign.

B) As well as, another example, which is as that, for babies whom are delivered at the same time, [day]: While, there could be a different time for the conceptions of their mothers, then, accordingly, there will be a different time of magnetic formatting to the foetus's brains, [of their babies], and, then, a different time of the real zodiac sign. Where, then, [actually], there will be a different zodiac for all of these delivers [born] babies.

Where, they whom been all born in the same time, as that of, (an example) the first of October, [which this can be illustrated at the diagram of Figure 6-2]. This is possible to deliver babies, for some groups of had been as foetuses, [in their mothers' wombs], for nine or ten months, as well as, until a part of babies could be delivered after six months, [as foetuses in the womb of their mother].

This can be explained by the following:

There are some babies could be born by six months. This means that, these babies been started to be foetuses on the beginning of April, [as the mothers had their fertilization eggs at the beginning of April]. Where, [after 5 weeks], the magnetic formatting time to the foetuses' brains should be at the end of the first week of May, which is the time of their zodiac sign.

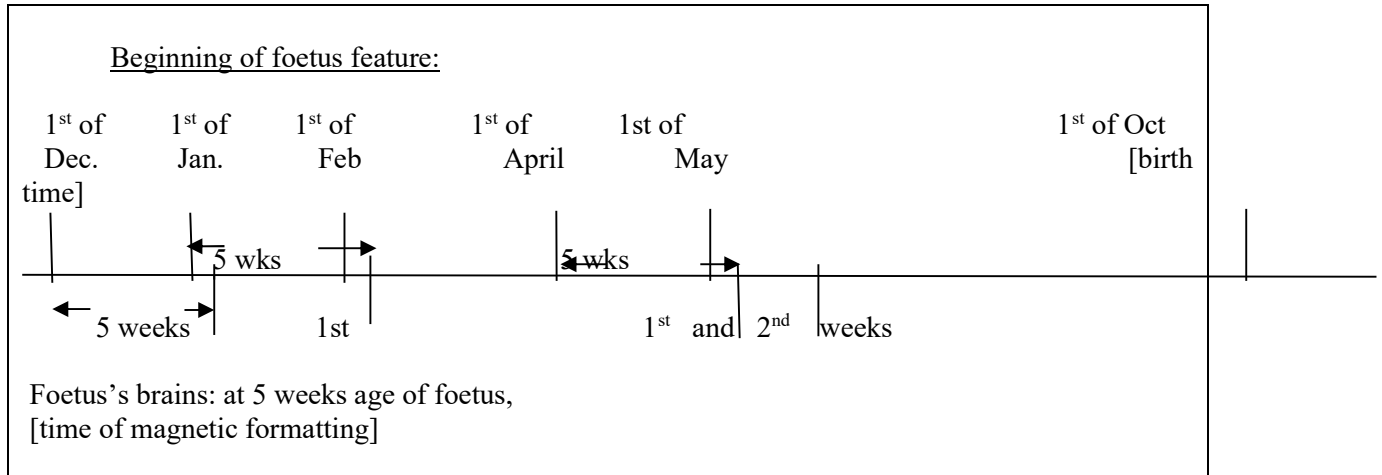

Figure 6 – 2: Showing the same time of babies' birth [1st October], for different time of mothers' conceptions. Where there will be a different magnetic formatting time to the foetuses' brains, [and then variety of real zodiac sign time].

Also, there are some other babies could be born after nine months. This means that these born babies had been started to be in foetus feature in the beginning of January. Then, the magnetic formatting time to their foetuses' brains should be at the end of the first week of February, which is the time of their real zodiac sign.

As well as, there are other babies whom been started to be in foetus's feature in February and in March, then they will be born at eight and seven months [in 1st of October]. Thus, the magnetic formatting to their foetus feature's brains should be at the end of the first weeks of March and April respectively, [where, these are the different times of their real zodiac signs].

Where, also, the possibility, is that there were babies to be delivered after ten months, where they to be in the womb of their mothers. This means that they were started to be in foetuses feature, in the beginning of previous December. Which means that those babies have their brains been magnetically formatted at the end of the first week of the following January, which is the time of their real zodiac sign.

C) Another possible construction of a method of traditional zodiac sign, is that:

For the same time of the beginning of foetuses' feature, [creation], as that, for example, in the 1st of January. For this case, then, after five weeks, [of foetus age], which may be, nearly, the same time, for all foetuses' brains to have their magnetic formatting, as all brains will be ready, [nearly in the same time], to be formatted. Then all of these foetuses will have the same real zodiac sign time, which will be in the first week of February, [as is illustrated in the diagram of Figure 6-3].

While, the foetuses birth time, [when each is delivered as a baby], could be different; as some of those foetuses been given birth after six, seven eight months, etc..., (or even ten months). This is as that of delivering the babies are in July, August, September, etc... This can be shown in the diagram of Figure 6-3.

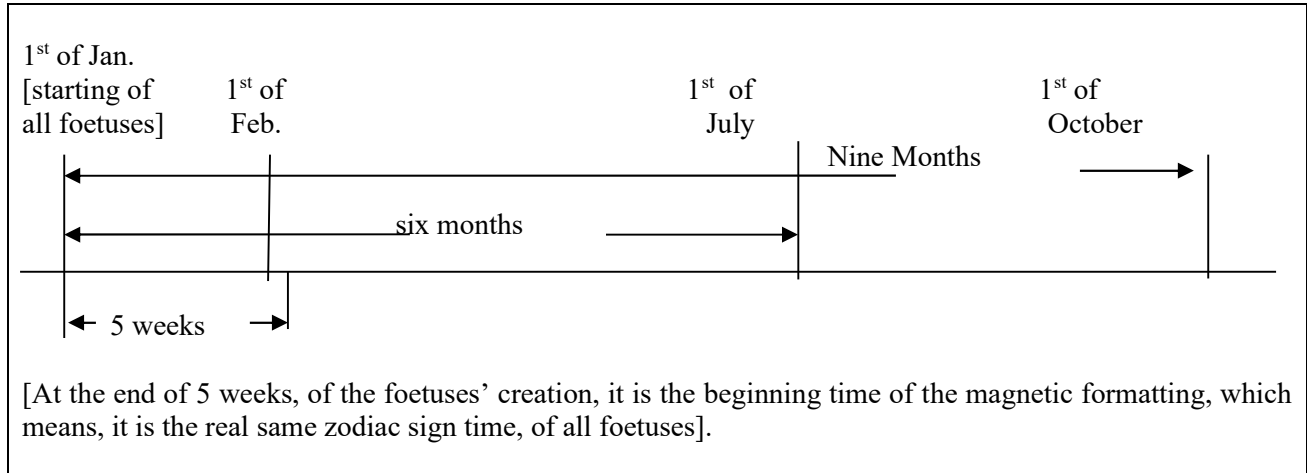

Figure 6 –3: Showing the same time of foetuses formation, [beginning of February], while there is a big difference in time of babies' birth.

This means that, there are varieties of the birthing times of delivering the babies, while all of these babies having the same time of the real zodiac sign.

Also, there is a possibility for more than one time of magnetic formatting, [for the foetuses' brains], and then a variable time of the real zodiac sign, for many babies whom all been born in the same time, as that of the beginning of October.

Hence, one of the main **discussion** of the logical result of **zodiac**, is that:

The traditional zodiac sign time is not going to be depending on the birth time, [delivery], of a person. Which means that, it is not true to be given a zodiac sign label to all of those babies been born in a certain birth time [date and hour time]. While, it is possible to be labelling the same zodiac sign time for babies been born in different times, [even by a different of many weeks or months].

A practical support to these results, can be shown in the references: [12] and [13].

7- Conclusion:

There are some important points to be delivered from the subject, which are as the followings:

1- It can be shown that the real zodiac sign is not easily to be exactly known. This is because real zodiac sign depends on: the exact time of the conception of the mothers, and then for, the beginning of foetuses' feature, [creation]. Also, for time of the magnetic formatting action of the planets' magnetic fields, which been applied on the foetus's brain at a certain stage time of the foetus brain. Where, both the foetus brain existence time and magnetic formatting time, are not been possible, yet, to be calculated in a correct method.

Then the born time [day and hour] of a person is, only, important for the occasion of the birth itself. While it is not entirely concerning to be accounted as the person's real zodiac time.

2- The List of Tables in Literature and other references, which have been published for traditional zodiac, should have their information [all the data] to be corrected, and yet to be have changed. Where these information are entirely concerned with the born time of a person, where this is not a true of exact real zodiac sign information.

3- To calculate the exact time of real zodiac: There should be a certain correct performing to create a novel method to calculate the exact time of mother's conception, and that of exact time for the planets' magnetic formatting to the foetus's brain. While these are still be difficult to be performed.

8- Future work:

There should be created a novel method or a novel instrument which have to be very sensitive for measurements of real zodiac to know the exact time [day an hour], of the egg cell fertilization of a mother, and the exact formatting time for the foetus's brain.

Where then, to be possible to firmly calculate the exact time of conceiving of the mother. Then after, to perform a correct calculation to the magnetic formatting time to the foetus's brain. Where, accordingly to have exactly correct calculating the real zodiac sign time of a person.
